

LG LIGHT BULB PAIRING INSTRUCTIONS

1 INITIATE PAIRING PROCESS

Initiate the pairing process from the IntelligentHome touchscreen.

- A. From the home screen, select “Settings”
- B. Select “Home Devices”
- C. Select “Lighting”
- D. Select “Add Lights”
- E. Press “Next” to start the discovery process from the touchscreen

2 INSTALL LIGHT BULB

Install the light bulb in the lamp or light fixture. Ensure that the lamp or light fixture is receiving power. The light bulb automatically starts the discovery process.

3 WAIT FOR DISCOVERY

Wait for the light bulb to be discovered by the touchscreen. It appears as a “Dimmable Light.”

4 CONFIGURE BULB

Follow the instructions on the subsequent screens to name and configure the light bulb. If dimming is desired, edit the “Dimmable” option by choosing “Yes” in the drop-down menu.

5 TEST OPERATION

Return to the home screen, and touch the “Lights” icon. Test the operation of the newly configured light bulb.

- A. Touch the bulb icon of the newly added light to turn it off or on.
- B. To dim or brighten (if configured as dimmable), touch the settings icon to the bottom right side of the bulb icon. On the subsequent screen, touch the vertical bar to dim or brighten.
